

Automated barrel changing system

- fully electric-

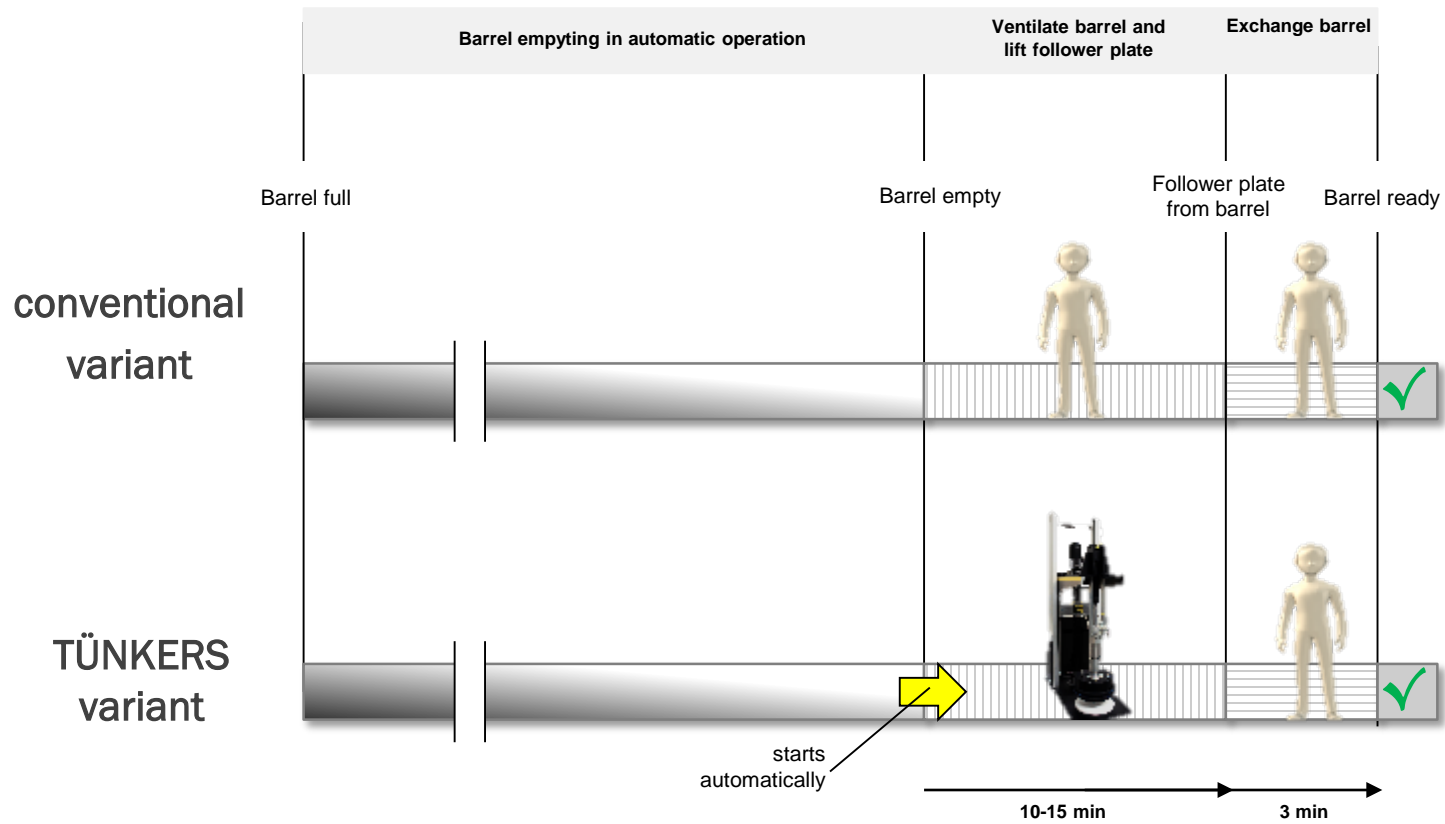

- In fully automated systems, barrel exchange of dosing systems is one of a few manual activities
- This time-consuming task may only be executed by qualified staff
- There is an accident hazard especially due to the fact that pressurized air may cause uncontrollable, sudden motions when the follower plate is lifted

- Controlled automated lifting of the follower plate by electric drive
- Automated barrel ventilation by means of miniature industry compressor

➤ Semi-automated barrel exchange

System comparison

Conclusion:

- Much less working time required for barrel exchange
- Increased safety for the worker
