TÜNKERS®
Ingenuity in series.

COMPONENTS FOR AUTOMATIC MANUFACTURING

More than 40 years ago, the clamping technology formed the nucleus of the TÜNKERS automation programme consisting of 9 modules today.

In fact, technically correct clamping and positioning of work pieces is always one of the first automation steps.

CLAMPING

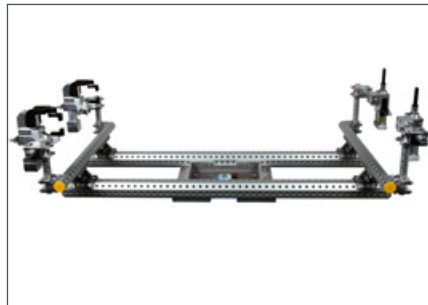

In the TÜNKERS e-shop you find pneumatic clamps and pneumatic cylinders as well as manual clamps providing a selection of products as part of the much more extensive programme of clamps. Discover the broad diversity under www.tuenkers.de.

Gripper and handling technology are core competences of the wide TÜNKERS product range.

Our portfolio includes various modular system solutions based on force-locking and form-locking concepts.

GRIPPING

Typical applications include punching, embossing or joining, which are required as additional process steps when manufacturing finished components.

Due to the flexibility of the construction kit, gripper tasks in other automation technology areas can also be realised.

The newly developed TÜNKERS Multi-flex consoles can be manually adjusted in 3 mm steps to 50 height variants each.

This is done by means of only 3 screws for locking and stable fixing of the extendable stays.

CONSOLE

The design effort is minimized as step files for all heights are available for download.

The consoles are suitable for a wide range of applications.

TÜNKERS E-SHOP - NOW WITH EXTENDED ASSORTMENT

The core assortment in the shop revolves around the functionalities clamping, positioning and gripping. Particularly in clamping technology, Tünkers offers an enormous variety of sizes and functionalities, also from stock.

Here, in addition to the swivel clamps of cylinder sizes from 25-63 mm, small versions of sizes 12-20 mm are now also offered. The segment of parallel and angular grippers for external and internal clamping in cylinder sizes 6-80 mm is completely new.

The new electric clamps, which are now also represented in the e-shop, do justice to the topic of energy saving. Tünkers innovations are joined by the compact Linear units ITLM, which can now be ordered online in many standard versions.

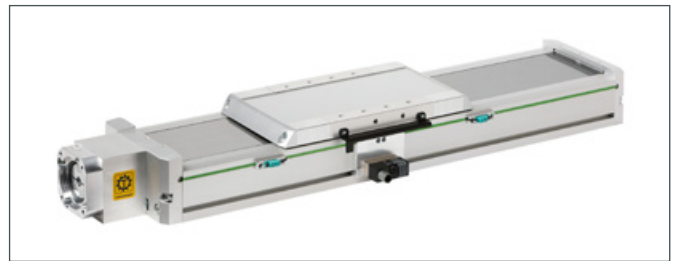

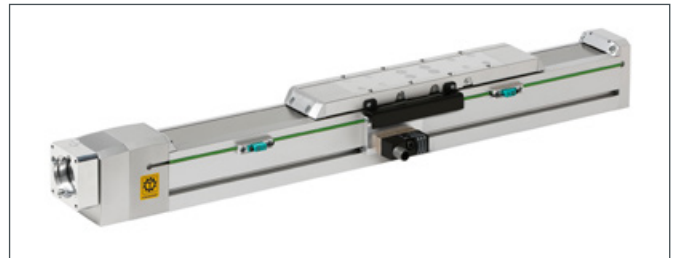

The innovations in the clamping and positioning segments are rounded off by Tünkers' specially developed Multiflex consoles, which are available in 3 mm steps are height adjustable.

Electro Clamps

Parallel Gripper

Linear Units

Item description, product image, data sheet, price information of 3D data – the TÜNKERS e-shop – in conjunction with our homepage provides you with all necessary information for uncomplicated purchase.

REALLY PRACTICAL DIRECTLY FROM STOCK

TÜNKERS is not only the specialist for customized solutions associated with industrial robots.

The company's strength is also based on the development of standard components and compatible modules for automation systems for fixture construction.

Especially in clamping technology TÜNKERS offers you an enormous variety of sizes and functionalities also sold ex stock. The TÜNKERS Gripper Technology is also designed as a modular system. As a result, you can configure your grippers individually and cost-efficiently using various profiles, base plates and connection elements.

The TÜNKERS e-shop provides you immediately with mechanical automation products for each application and company size and without significant engineering effort.

Advantages of the TÜNKERS E-SHOP:

- Convenient ordering at any time
- Simple registration and navigation
- Rapid delivery
- Uncomplicated payment by invoice
- Attractive prices
